Regarding claim 10, Prior Art fails to specifically teach that, the performance of each of said antennas can be described by an axial ratio defined as the difference between vertical gain and horizontal gain at a particular frequency and wherein said axial ratio varies by no less than plus or minus 5 dB.

Regarding claims 21, and 34 Prior Art fails to specifically teach that, a pair of spiral antenna elements disposed on said first side of said substrate in which each of said elements has a corresponding feed point, and said spiral antenna elements making at least three 360 degree turns; a conducting ground plane disposed on said second side of said substrate, wherein said substrate separates said spiral antenna elements from said conducting ground plane by a distance that no greater than 6 inches.
